Patient Instructions After Crown or Bridge Treatment

We perform crown and/or bridge procedures. For your comfort and safety remember that you have a temporary crown after your first visit. This protects and serves as a placeholder while your custom crown is being prepared. Should your temporary crown become loose or fall off, call us immediately at 903-345-6065.

A temporary crown is not intended for long-term use, so it is vital for you to have your temporary crown replaced with a permanent crown. While wearing your temporary crown you may experience discomfort in treatment areas. Also, your teeth may become sensitive to cold or pressure. Try using a toothpaste for sensitive teeth.

Once your temporary crown or bridge is removed and a permanent one placed, please allow a few days to adjust to your new crown or bridge. Slight discomfort or sensitivity is normal. If after several days, you experience discomfort, please call us immediately at 903-345-6065.

To maintain your crown or bridge, continue with regular brushing and flossing. Remember, it is very important to keep the area along the gum line clean.
